PROFESSIONAL EXPERIENCE

My Work Experience

I supported back-office operations for a telecommunications provider, working with subscriber records, phone numbers, and tariff plans in internal CRM and company databases.

Role Overview

My work focused on keeping subscriber information accurate and helping colleagues prepare targeted number lists for operational use. I used SQL queries to locate records, apply defined criteria, and transfer selected results between databases for other departments.

Key Responsibilities

- Worked with subscriber phone numbers, tariff plans, and related service records in internal databases.
- Connected or activated tariff plans and updated subscriber services as requested.
- Searched for subscriber records and removed or updated phone numbers in databases at colleagues' request.
- Wrote and ran SQL queries against server databases to retrieve and review records.
- Filtered number lists using conditions such as account balance and activation date, including activation within the previous two years.
- Transferred filtered results between databases so other departments could use them for outbound calling.

Technical Skills

DATABASES	SQL querying; internal CRM and company databases; subscriber record maintenance
DATA WORK	Record search and filtering; criteria-based number lists; database-to-database result transfer
WORK ENVIRONMENT	Virtual work environment; secure VPN access
